

## High Inlet Temperature Non-Cycling Refrigerated Dryers 0.42-3 m<sup>3</sup>/min, 15-100 cfm

High inlet temperature non-cycling refrigerated dryers ensure a constant dew point at all load levels and will deliver continuous dry air performance that satisfies industry standards. These units provide affordable solutions for a variety of applications that require high air inlet temperatures, including dry cleaning, light processing, petrochemical, automotive, manufacturing as well as oil and gas.

### Features

- **High Inlet Air Temperature Operation:** Accommodates inlet air temperatures up to 200°F (94°C) and are ideal for use with compressors that do not include built-in aftercoolers.
- **Lower Cost of Ownership:** Efficient heat exchangers, a built-in stainless steel demister that removes all moisture and a fully adjustable programmable electronic drain valve reduce energy use and minimize air loss
- **Built-in Reliability:** Corrosion-resistant heat exchangers, an enhanced control-system and high-efficiency moisture-separation ensure a steady long-term supply of dry air
- **Smart Control:** Easy to use, advanced microprocessor control that lets you easily adjust and manage system parameters
- **Consistent Clean, Dry Air:** Variable-speed fans reduce power consumption when units operate at less than maximum cooling capacity, while ensuring a consistent dew point
